International Journal of Parallel Programming
Volume 17, 1988

Formerly *International Journal of Computer and Information Sciences*

International Journal of Parallel Programming is a forum for the publication of peer-reviewed, high-quality original papers in the computer and information sciences, focusing specifically on programming aspects of parallel computing systems. Such systems are characterized by the coexistence over time of multiple coordinated activities. The journal publishes both original research and survey papers. Fields of interest include: linguistic foundations, conceptual frameworks, high-level languages, evaluation methods, implementation techniques, programming support systems, pragmatic considerations. architectural characteristics, software engineering aspects, advances in parallel algorithms, performance studies, and application studies. In addition to full-length refereed contributions, the journal publishes a department, Sans Pareil, that features short contributions of a lighter nature, including anecdotes, humorous verse, tongue-in-cheek commentary, and other entertaining insights into parallel programming.
